Ideation Phase
Brainstorm & Idea Prioritization Template

Date	30 September 2026
Team ID	SWTID-2026-1595
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Project problem statement	Brainstorming focus
Employee data is received in spreadsheet form and needs to be imported into ServiceNow accurately and efficiently, while avoiding duplicate records and maintaining data integrity.	Explore a simple end-to-end approach using an Import Set table, Transform Map field mapping, Coalesce for duplicate prevention, and Reports/Dashboard for validation and monitoring.

Step-2: Brainstorm, Idea Listing and Grouping

Idea Group	Brainstormed idea from the project
Data Preparation	Create a Google Spreadsheet with sample employee data and download it as an Excel file.
Custom Table	Create the Employee Test target table and add Employee ID, Employee Name, Email, Department and Location.
Import Set	Create the Employee Import staging table and load the spreadsheet data.
Transform Map	Create the Sample Spreadsheet Import Transform Map and map source fields to target fields.
Coalesce	Use Employee ID as a coalesced field so repeated imports update existing records instead of creating duplicates.
Validation	Check Transform history and the Employee Test table to confirm inserted, updated, skipped or ignored records.
Reports	Create Employees by Department, Employees by Location and Employee List reports.
Dashboard	Combine the reports into an Employee Analytics Dashboards view for centralized monitoring.

Step-3: Idea Prioritization

Priority	Idea	Importance	Feasibility	Reason based on project
1	Transform Map with field mapping	High	High	Core mechanism for transferring spreadsheet fields into the target table.
2	Coalesce on Employee ID	High	High	Prevents duplicate records and supports updates during repeated imports.
3	Import Set staging table	High	High	Provides the staging area required before transformation.
4	Reports and Dashboard	Medium	High	Provides visibility into employee data, import activity and trends.
5	Data preparation in spreadsheet	Medium	High	Provides the source data needed for the import process.
6	Transform history validation	High	High	Confirms inserted, updated, skipped and ignored records.

Prioritization summary: The brainstorming identifies the Import Set + Transform Map workflow as the central implementation idea, with Coalesce and validation supporting data integrity. Reports and the dashboard extend the solution with monitoring and visibility.

Source project details used: The project describes spreadsheet preparation, a custom Employee Test table, Employee Import staging, the Sample Spreadsheet Import Transform Map, Coalesce, transform validation, three reports, and an Employee Analytics Dashboards dashboard.
