Project Design Phase-II

Data Flow Diagram & User Stories

Date	30 September 2026	**Team ID**	SWTID-2026-1595
Project Name	Import Data using Transform Maps	**Maximum Marks**	4 Marks

Data Flow Diagrams:

The project imports employee data from an Excel spreadsheet into ServiceNow using an Import Set and Transform Map. Employee ID is used with Coalesce to identify existing records, while reports and a dashboard provide a consolidated view of employee data.

HR / Data Admin Employee spreadsheet (ID, Name, Email, Dept., Location)	**Load Data** Import Set Employee Import	**Transform Map** Field mapping Coalesce: Employee ID	**Employee Test** Target table Employee records	**Reports & Dashboard** Department / Location charts Employee List

Flow: Spreadsheet → Import Set staging table → Transform Map (field mapping and Coalesce) → Employee Test table → Reports → Employee Analytics Dashboards.

Data Flow Description

• **Input:** Employee details are prepared in an Excel spreadsheet.

• **Staging:** Load Data uploads the spreadsheet into the Employee Import Import Set table.

• **Processing:** The Transform Map maps source columns to Employee Test fields. Coalesce on Employee ID supports updates to matching records and avoids duplicate inserts.

• **Storage and validation:** Transformed records are stored in Employee Test and checked through transform history for inserted, updated, and ignored rows.

• **Output:** Reports summarize employees by department and location and provide an employee list. These reports are added to Employee Analytics Dashboards.

User Stories

The following user stories are based on the project workflow and features described in the project details.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
HR / Data Admin	Spreadsheet Preparation	USN-1	As a data administrator, I can prepare employee data in a structured spreadsheet with employee ID, name, email, department, and location so that it can be imported consistently.	Spreadsheet contains the required headers and employee rows in a supported format.	High	Sprint-1
HR / Data Admin	Import Data	USN-2	As a data administrator, I can upload an Excel spreadsheet into the Employee Import staging table so that source data is available for transformation.	The file is loaded into the Employee Import table and the import status is shown.	High	Sprint-1
ServiceNow Admin	Configure Target Table	USN-3	As a ServiceNow administrator, I can create the Employee Test table with the required employee fields so that imported records have a destination.	Employee Test includes Employee ID, Employee Name, Email, Department, and Location fields.	High	Sprint-1
ServiceNow Admin	Transform Mapping	USN-4	As a ServiceNow administrator, I can configure a Transform Map between Employee Import and Employee Test so that source fields map to the correct target fields.	The source and target fields are mapped and the Transform Map is saved.	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
HR / Data Admin	Transform Data	USN-5	As a data administrator, I can run the Transform Map so that spreadsheet rows are inserted into the Employee Test table.	Transformation completes successfully and imported records are visible in Employee Test.	High	Sprint-1
ServiceNow Admin	Data Integrity	USN-6	As a ServiceNow administrator, I can enable Coalesce on Employee ID so that repeated imports update matching employee records instead of creating duplicates.	Existing IDs update, new IDs insert, and repeated unchanged rows are ignored rather than duplicated.	High	Sprint-2
HR / Data Admin	Import Validation	USN-7	As a data administrator, I can review transform history and record statuses so that I can verify inserted, updated, and ignored rows.	Transform history displays the processing result for uploaded rows and records can be checked in Employee Test.	High	Sprint-2
HR / Manager	Employee Reporting	USN-8	As an HR manager, I can view employee counts grouped by department so that I can understand department-wise employee distribution.	A pie chart report named Employees by Department groups Employee Test records by Department using Count.	Medium	Sprint-2
HR / Manager	Employee Reporting	USN-9	As an HR manager, I can view employee counts grouped by location so that I can understand location-wise employee distribution.	A bar chart report named Employees by Location groups Employee Test records by Location using Count.	Medium	Sprint-2
HR / Data Admin	Employee Reporting	USN-10	As a data administrator, I can view an employee list containing key employee fields so that I can review imported data.	Employee List Report displays Employee ID, Employee Name, Email, Department, and Location.	Medium	Sprint-2
Administrator	Dashboard	USN-11	As an administrator, I can add the employee reports to a centralized dashboard so that employee information is available in one place.	Employee Analytics Dashboards contains the department, location, and employee list reports.	High	Sprint-2
Administrator	Dashboard Access	USN-12	As an administrator, I can manage dashboard sharing and access so that relevant users, groups, and roles can view the dashboard.	Dashboard sharing options allow access to be restricted by users, groups, and roles.	Medium	Sprint-2

Project Outcome

The workflow demonstrates employee data loading, field mapping, transformation, duplicate prevention using Coalesce, validation through transform history, and centralized reporting through charts and a dashboard.
