PROJECT DESIGN PHASE-II

Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWTID-2026-1595
Project Name	Import Data using Transform Maps (Spreadsheet)

Functional Requirements

Following are the functional requirements of the proposed ServiceNow employee data import and analytics solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Prepare Employee Source Data	Create an Excel/Google Spreadsheet containing Employee ID, Employee Name, Email, Department, and Location.
FR-2	Create Employee Test Table	Create the Employee Test custom table (u_employee_test) with Employee ID, Employee Name, Email, Department, and Location fields.
FR-3	Load Data into Import Set	Create/use the Employee Import table (u_employee_import) and load the spreadsheet as staged import data.
FR-4	Configure Transform Map	Create the Sample Spreadsheet Import Transform Map and map source fields from Employee Import to Employee Test.
FR-5	Transform and Validate Data	Run the Transform Map and verify that the imported employee records are created correctly in the Employee Test table.
FR-6	Prevent Duplicate Records	Enable Coalesce on an appropriate field, such as Employee ID, so repeated imports update existing records instead of creating duplicates.
FR-7	Update and Insert Employee Records	Process new and changed spreadsheet rows so new Employee IDs are inserted and existing Employee IDs are updated according to the Transform Map.
FR-8	Generate Employee Reports	Create Employees by Department, Employees by Location, and Employee List Report using the Employee Test table.
FR-9	Create Employee Dashboard	Create Employee Analytics Dashboards and add the three employee reports to provide a centralized view.

Non-functional Requirements

Following are the non-functional requirements of the proposed solution, derived from the project workflow and expected outcomes.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import, transformation, validation, reporting, and dashboard workflow should be clear enough for administrators and HR users to operate.
NFR-2	Data Integrity	Imported employee records should retain the required field mappings and avoid duplicate records through Coalesce.
NFR-3	Reliability	Successful imports and transformations should be verifiable through completed/success states and transform history.
NFR-4	Performance	The solution should support bulk employee data migration through spreadsheet import rather than manual record entry.
NFR-5	Maintainability	The Transform Map, field mappings, reports, and dashboard should be configurable and reusable for subsequent imports.
NFR-6	Visibility	Reports and the Employee Analytics Dashboards should provide centralized visibility into employee records, department/location distribution, and import activity.
